

Coordinate Geometry

- Given that the points $P(2,3)$, $Q(-1,7)$ and $R(3,0)$ are the vertices of a triangle PQR , find the perimeter of the triangle.
- Given the points $A(3h,h)$, $B(3,11)$ and the distance between point A and B is 10 units, find the possible values of h
- Points $T(0,k)$ and $V(-4,3)$ are two points that are equidistant from the origin. Find the value of k
- Given that points $P(-6,4)$ or $(r,0)$, $R(-3,2)$ and $S(-2,6)$ are four points on the Cartesian plane, find the value of r if the distance of PQ is equal to the distance of RS .
- The diagram shows two points on a Cartesian plane.

Given that the distance between point A and point B is 20 units, find the possible values of h .

- Given that $A(h,4)$, $B(-5,k)$ and $C(1,1)$ are three points on a straight line in a Cartesian plane, find the values of h and k if C is the midpoint of A and B .
- The diagram shows a parallelogram $ABCD$ on a Cartesian plane.

Find the coordinates of point A .

- Given that the points $P(x,7)$, $Q(3,7)$, $R(3,y)$ and $S(-5,-5)$ are vertices of a parallelogram, find the values of x and y
- Given the points $A(h,4)$, $B(5,-1)$ and $C(7,k)$ are three points on a straight line in a Cartesian plane, find the values of h and k if point C divides AB in the ratio of $3:2$.
- Given that point $T(1,4)$ divides the straight line joining the point $H(7,6)$ and $K(-2,3)$ in the ratio of $p:q$. Find the values of p and q
- Given that point $R(-1,8)$ is situated on the straight line joining the point $P(8,-4)$ and $Q(-4,12)$, find the ratio of $PR:RQ$.
- $A(4,-3)$, $B(6,-1)$, and C are the three points on a straight line. Given that $3AB=2BC$, find the coordinates of point C
- Given that $A(5,6)$, $B(5,2)$ and $C(10,7)$ are three points on a Cartesian plane. Find the area of the triangle ABC .
- Find the area of quadrilateral $PQRS$ with vertices $P(-1,4)$, $Q(2,2)$, $R(0,-3)$ and $S(-1,-1)$
- The points $H(1,7)$, $I(4,3)$, $J(1,-1)$ and K are the vertices of a rhombus. Find
 - The coordinates of point k
 - The area of the rhombus $HIJK$

Coordinate Geometry

16. The vertices of a triangle are $A(3,4)$, $B(-4,1)$ and $C(1,2h)$. If the area of the triangle ABC is 18unit^2 , find the possible values of h .
17. Given points $A(3k,1)$, $B(3,4)$, $C(-2,5)$ and $D(0,7)$ are collinear, find the possible values of k .
18. A triangle ABC with vertices $A(k,-1)$, $B(h,1)$ and $C(-2,3)$ has an area of 9unit^2 . Find the possible values of $2h-k$.
19. The diagram shows a quadrilateral PQRS.

If the area of quadrilateral PQRS is twice the area of the triangle PQR, find the value of k .

20. $H(-3,2)$, $J(3,-2)$ and $K(7,8)$ are three points on the Cartesian plane. Given point M is the midpoint of JK, find the area of the triangle HJM.
21. $A(-5,1)$, $B(-1,k)$ and $C(7,10)$ are three collinear points on a Cartesian plane. Find the value of k .
22. A straight line passes through point $A(-7,-8)$ and $B(5,11)$ on a Cartesian plane. Find the equation of the straight line AB in intercept form.
23. A straight line has a gradient of $\frac{1}{3}$ and passes through the midpoint of the line joining the points $P(3,-2)$ and $Q(1,8)$. Find the equation of the straight line.
24. A straight line passes through the points $T(-2,1)$ and $U(1,10)$. Find the x-intercept of the straight line TU.
25. Given that the straight line $y = x + 2$ and $y = -\frac{4}{3}x + \frac{1}{3}$ intersect at point A. Find the coordinates of the point A.
26. A straight line that has a gradient of $\frac{3}{2}$ and passes through point $P(-2,-7)$ intersects another straight line $2y + x = 8$ at point R.
 - a. Find the equation of the straight line that passes through point P
 - b. Hence, determine the point of intersection of the two straight lines.
27. Find the equation of the straight line that is parallel to the line $\frac{x}{4} - \frac{y}{2} = 1$ and passes through point $(2,1)$.
28. Given that equation of the straight lines $2y = (h - 3)x - 3$ and $y - 2kx = 3$ are parallel, express h in terms of k .
29. The diagram shows a triangle ABC on a Cartesian plane.

Find the equation of the straight line that is parallel to the straight line BC and passes through point A.

30. The diagram shows a parallelogram PQRS.

Find the equation of the straight line QR.

31. The equation of two straight lines on the Cartesian plane are $\frac{x}{5} + \frac{y}{2} = 1$ and $5x - 2y = 8$. Determine whether the lines are perpendicular to each other.
32. Find the equation of the straight line that passes through point P(-4,1) and is perpendicular to the straight line $4y - 12x + 6 = 0$.
33. X(1,9) and Y(-5,-7) are two points on a Cartesian plane. Find the equation of the perpendicular bisector of the straight line XY.
34. The straight line $y - px = 12$ is perpendicular to straight line $2y + qx = 6$. Express p in terms of q
35. The diagram shows a straight line HK perpendicular to line JL.

Given the equation of straight line HK is $y + x - 3 = 0$, find the point of intersection between two straight lines.

36. Given that P (x,y) is a moving point such that it is equidistant from point X(2,3) and point Y(-4,5), find the equation of the locus of P
37. A(-1,2) and B(3,7) are two points on a Cartesian plane. Given that point (x,y) is a moving point such that PA:PB=1:3, find the equation of the locus of P
38. A point P moves such that its distance from point H(-1,4) is always 7 units . Find the equation of the locus of P.
